# JUST KEEP DIGGING

A lot of people don't believe in curses. A lot of people don't believe in yellow spotted lizards either, but if one bites you, it doesn't make a difference whether you believe in it or not.

Actually, it is kind of odd that scientists named the lizard after its yellow spots. Each lizard has exactly eleven yellow spots, but the spots are hard to see on its yellow-green body. The lizard is from six to ten inches long and has big red eyes. In truth, its eyes are yellow, and it is the skin around the eyes which is red, but everyone always speaks of its red eyes. It also has black teeth and a milky white tongue. Looking at one, you would have thought that it should have been named a "red-eyed" lizard or a "black-toothed" lizard, or perhaps a "white-tongued" lizard. If you've ever been close enough to see the yellow spots, you are probably dead.

The yellow-spotted lizards like to live in holes, which offer shade from the sun and protection from predatory birds. Up to twenty lizards may live in one hole. They have strong, powerful legs, and can leap out of very deep holes to attack their prey. They eat small animals, insects, certain cactus thorns, and the shells of sunflower seeds. (Chapter 8 – Holes)
